

Online Purchases

WePay™ cards can be used for online purchases however they must be registered with the card processor before doing so. The registration is necessary for security purposes. When an online transaction occurs, the merchant will require some identifier from the cardholder (e.g., address or zip) to use when requesting authorization from the card processor for that transaction. That identifying information must match what is in the processor's system for the transaction to be approved.

Cardholders (participants) must contact the card processor directly via the 800 number or the website listed on the card (also shown on the card sleeve and brochure.) The registration process is relatively simple but requires the cardholder to provide their full name, address, and SSN to the card processor for identification purposes. Recall that our card processor does not have any of that information since the cards are anonymous. Once the card is registered it can then be used for internet purchases.
